DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. James F. McKeown on April 26, 2004.

The application has been amended as follows:

- a. In claim 66, at line 4, delete "4";
- b. In claim 67, at line 4, amend " \leq " (first occurrence) to -- < --.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: none of the prior art of record appears to teach, suggest or render obvious the invention of claim 61.

DE '592, held to be the closest prior art of record to claim 61, discloses magnetron sputtering wherein the substrate receiving area and single magnetron sputter source are provided at an angle between 0 and 90 degrees. For the record, the Examiner disagrees with Applicant's position that DE '592 does not rotate the substrate. Fig. 1 of DE '592 clearly shows that the substrate and substrate holder 5 are rotated about its central axis.

Art Unit: 1745

However DE '592 does not expressly teach of selecting the diameter of the circular area to be large than the diameter of the circular sputtering surface or of the specific intersecting angle being from 43-50 degrees.

When the reference does not disclose that the drawings are to scale and is silent as to dimensions, arguments based on measurement of the drawing features are of little value. See *Hockerson-Halberstadt, Inc. v. Avia Group Int 'l*, 222 F.3d 951, 956, 55 USPQ2d 1487, 1491 (Fed. Cir. 2000) (The disclosure gave no indication that the drawings were drawn to scale. "[I]t is well established that patent drawings do not define the precise proportions of the elements and may not be relied on to show particular sizes if the specification is completely silent on the issue.").

It is held that absent specific teachings in the disclosure of DE '592 as to the relative diameter relationship between the diameter of the circular area and the diameter of the circular sputtering surface, there is insufficient support for using the drawings to scale and alone are not held to be sufficient to teach the diameter relationship as defined in claim 61.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion
